DETAILED ACTION

Specification

The abstract of the disclosure is objected to because it exceeds 150 words.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kim et al (5,184,828) in view of Hiraoka et al (5,711,723). Kim et al discloses a golf ball with a two-layered core and a cover. The inner core has a diameter from 23 to 35 mm and center Shore D hardness from 30 to 48 (50 to 73 JIS-C) (fig 1). The inner core comprises polybutadiene, a co-crosslinking agent, organic peroxide, and a filler (col 3, lines 65-69; col 4, line 25). The Shore D hardness at a distance 15 mm away from the center is 45 (69 JIS-C) (table 1, examples 1). This value is 7 Shore D units (19 JIS-C) higher than the center. The outer core has a thickness from 0.5 – 9 mm (fig 1) and a Shore D hardness from 30 to 56 (50 to 84 JIS-C). The outer core comprises polybutadiene, a co-crosslinking agent, organic peroxide, and a filler (col 3, lines 65-69; col 4, line 25). Table 1, example 1 shows the outer core Shore D hardness higher than

the center hardness by 6 units (18 JIS-C). Kim discloses a ionomeric cover layer thickness of 2 mm (table 1) but does not disclose a cover comprising an ionomer and a thermoplastic elastomer or diene block copolymer. However, Hiraoka teaches a three piece golf ball with a cover made from an ionomer and polyurethane (elastomer) (col 4, lines 20-25) and a Shore D hardness from 59 to 70 (col 5, line 9). One skilled in the art would have modified the invention of Kim with the cover of Hiraoka to increase the durability of the golf ball.

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 3711

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
